- **1. Measure the rootball** with a shovel.
- 2. Dig a hole up to twice as wide as your rootball in the shape of a wide V.
- 2. Dig deep enough that the rootball sticks up about two finished grade.

- 4. Remove wire
- 5. Put the tree in the hole. Make sure it's straight, and fill the hole with soil.
- **6. Add mulch** to a depth of three to four inches around the tree. Leave a couple of inches of clear space around the trunk so the mulch doesn't touch it. Don't make a mulch volcano!
